

**Associate Professor (Microbiology)
Florida Gulf Coast University
Fort Myers, Florida**

Minimum Qualifications: Doctoral degree from a regionally accredited institution or equivalent accreditation, or the highest degree appropriate in the field of specialization with experience in teaching, academic research, and service.

Preferred Qualifications: Ph.D. in Microbiology from a regionally accredited institution or equivalent accreditation. A demonstrated record of achievement in research and teaching, rank-appropriate record of publications, and the desire and ability to develop an active research program with undergraduates. Applications encouraged from candidates committed to excellence in teaching undergraduate courses at all levels.

Position Description: Florida Gulf Coast University is seeking a broadly-trained microbiologist who will develop an active research program with undergraduates, teach lower and upper division courses in microbiology (general, pathogenic, environmental, microbial ecology, etc), one or more core courses in the major, and other courses commensurate with departmental needs and the individual candidate's expertise. A commitment to providing students with an exceptional educational experience through a variety of teaching/learning methods that include classroom, experiential, and technology-assisted strategies is expected. Other responsibilities include service and continued academic scholarship. Candidates should be able to function effectively in a rapidly-developing comprehensive regional university with a focus on creating a student-centered learning environment. The successful candidate will work closely with other departmental faculty members to develop and implement a growing undergraduate curriculum and to prepare for a graduate program.

Applications are only accepted online. Visit <http://jobs.fgcu.edu> and access Req # 0727.

Deadline: 2/21/08.
