

A Postdoc Position in Lin Lab

Position: A Postdoctoral Fellow position is available in Dr. Xiaorong Lin's laboratory in the Department of Microbiology at the University of Georgia (Athens, GA, USA).

<http://mibo.franklin.uga.edu/directory/faculty/xiaorong-lin>. UGA hosts strong research facilities for life sciences (e.g. MS, NMR, crystallography, microscopy, flow cytometry, bioinformatics, genetics, cell biology, infectious diseases, and vaccination center). In addition, the UGA interdisciplinary fungal group offers fantastic support for fungal biology research and training (<http://research.franklin.uga.edu/fungi>).

Research area: Lin lab focuses on key infectious mechanisms of the model human fungal pathogen *Cryptococcus neoformans*. We investigate cryptococcal life cycle and morphogenesis, and how these processes affect the disease progression in animal models. We are also interested in examining the role of cryptococcal mannoproteins in host-pathogen interactions and the molecular mechanisms underpinning cryptococcal adaptation to host conditions. Furthermore, we are working with other groups at UGA in the development of novel antifungal treatments.

Applicant qualification: Highly motivated candidates with a Ph.D. degree and strong skills in biochemistry and molecular biology are encouraged to apply. Experience with animal models of microbial diseases, cell biology, bioinformatics, or immunology is a plus. Qualified candidates are expected to work independently as well as in an interactive and dynamic team environment, with good written and oral communication skills.

Application: Applicants should send (1) their CV with bibliography, (2) a cover letter with a statement of research interests and career goals, and (3) contact information for three references to Dr. Xiaorong Lin by email: Xiaorong.Lin@uga.edu.
